

2 Channel Logic Level Converter 3.3V to 5V TTL Module For Arduino

Features:

2-channel high-voltage and low-voltage logic logic bidirectional translation

2-channel high-voltage logic low voltage logic converted into a one-way conversion

Module compatible with bread plate, can be used directly put on the bread board

Instructions for use: high voltage is 5V low voltage of 3.3V for example:

HV and 5V power connection

LV with 3.3V power supply connection

GND connection negative power, two power commons

RXI input 5v TTL, in RXO 3.3v TTL output

TXI input and output 3.3V TTL, TXO input and output 5V TTL, TXI and TXO bi Huzuan

Module Size: Approx. 1.5 x 1.5cm/ 0.6 x 0.6 inch

Package included:

1 x Logic Level Converter Bi-Directional Module
